## RESULT 1 AAR45389 AAR45389 standard; protein; 10 ĄΑ

ALIGNMENTS

25-MAR-2003 06-JUL-1994 AAR45389; PG beta subunit internal fragment. (revised)
(first entry)

Beta subunit; PG; polygalacturonase; tomato; pathogen.

Lycopersicon esculentum

08-MAY-1992; 07-MAY-1993; 05~JAN-1994. EP577252-A1. Misc-difference 92US-00880915. 93EP-00303533 Location/Qualifiers /note= "unknown"

(UYAR-) UNIV ARIZONA STATE.

WPI; 1994-009528/02. Dellapenna D;

Transgenic tomato plants contg. lowered levels of polygalacturonase isoform 1 - for prodn. of tomatoes less susceptible to pathogens and requiring less energy to inactivate poly-galacturonase activity.

Example; Page 6; 15pp; English.

\$\times \times \ N-terminal sequence analysis of purified PG beta-subunit was performed. Two internal fragments (AAR45389-90) were used for the construction of primers (AAQ54493-95). Two beta-subunit cDNA clones and fragments of 11 others were sequenced. The consensus DNA sequence obtained is given in AAQ54492. (Updated on 25-MAR-2003 to correct PN field.)

Sequence 10 AA;

96.0%; Score 48; DΒ 2 Length 10;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best Local Similarity
                                                                                                                                                                                                                                                                                                                                             AAW10696 and AAW10697 are internal peptides of the beta subunit of tomato polygalacturonase isoform 1 (PG1). The two peptides were generated by digestion with Lys-C and Gly-C endoproteases respectively. The peptides were used for the design of degenerate PCR primers used for cDNA library screening. A cDNA molecule encoding PG1 was identified, this sequence was used to produce constructs, antisense to the PG1 coding sequence, which are used to transform a tomato plant cell so as to reduce or eliminate PG1 activity. There are two isoforms of tomato polygalacturonase (PG), PG1 and PG2. PG1 has a much higher heat stability level (usually at least by 20 deg. C.) than PG2. By reducing or eliminating PG1 expression, leaving the less heat-tolerant isoform PG2. The process for production of tomato pastes, sauces etc. becomes less costly due to a lower temperature being needed for PG breakdown. A higher viscosity is also produced due to increased soluble pectin content. (Updated on 25-MAR-2003 to correct PF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Transgenic tomato plants with low level of polygalacturonase isoform 1 - have higher content of soluble pectin(s) and require less heat energy to eliminate polygalacturonase activity of the fruit.
                                                                                                                                                                                                                                                                      Sequence 10 AA;

The specification describes a CC polygalacturonase beta-subunit promoter. The promoter exhibits both high CC expression and high specificity, and provides tissue-preferential and CC developmentally regulated expression. The beta-subunit promoter is highly CC active in developing tomato fruit from as early as 10 days after CC pollination upto the onset of ripening, at which time it becomes CC inactive. The fruit specific, developmentally regulated promoter, can CC control the expression of target genes which affect the quality of CC developing fruit without affecting the ripening process. Target genes include genes responsible for sugar or starch metabolism, source sink CC relation, organic acid balance, flavour components, bathogen resistance, CC soluble solids, and water/pH relations. All or part of the promoter may be used to direct the expression of foreign or endogenous genes in the component of the promoter of the promoter may consider the expression of interest promoter in the constant of the promoter may be used to direct the expression of foreign or endogenous genes in the constant of the promoter may be used to direct the expression of foreign or endogenous genes in the constant of the promoter may be used to direct the expression of foreign or endogenous genes in the constant of the promoter may be used to direct the expression of foreign or endogenous genes in the constant of the promoter may be used to direct the expression of foreign or endogenous genes in the constant of the promoter may be used to direct the expression of foreign or endogenous genes in the constant of the promoter may be used to direct the expression of foreign or endogenous genes in the constant of the promoter may be used to direct the expression of the promoter may be used to direct the expression of the promoter may be used to direct the expression of the promoter may be used to direct the expression of the promoter may be us

                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                     The invention provides a new method for modifying pectin that involves providing a host having pectin methylesterase (PME) activity and polygalacturonase (PG) activity, transforming the host by silencing PG activity to provide an increased PME to PG ratio, preparing a PME extract from the transformed host, and using the PME extract to modify pectin. A PME modified pectin is useful for foodstuffs preparation, and to impart an increased functionality to food products such as yogurt, milk/fruit juice and whey drinks. PME is useful to reduce the number of ester groups in a pectin in a block-wise manner, and to de-esterify two or more adjacent galacturonic acid residue of a pectin on at least substantially all of the pectin chains. The present sequence represents an internal peptide fragment of the PG enzyme, used for designing primers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Modifying pectin, for foodstuffs preparation, involves transforming host having pectin methylesterase (PME) and polygalacturonase (PG) activity by silencing PG activity, to increase PME to PG ratio.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WO200078982-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Misc-difference

                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                        CC This invention describes a novel microorganism (A) of the genus Ashbya CC for biotechnical production of proteins (I), containing a genetic CC construct so that the protein-synthesis capacity is altered relative to CC the wild-type species A gossypii ATCC 10895. The invention also CC from Streptomyces halstedii; (2) promoter (P) and transcriptional CC terminator (TT) from the sequence encoding the glyceraldehyde phosphate CC regulatory regions that provide expression in Ashbya; (4) a vector CC containing (IIa), p and/or TT, or the structure of (3), plus signals that CC provide replication in host cells or integration into a cellular genome; CC is transformed Ashbya, for production of cellulase, containing the CC structure of (3) in replicable form; (6) producing (I) using (A); (7) CC producing (A) by exchanging the promoter and/or increasing the gene copy commber, and/or by introducing a cellulase-encoding gene; and (B) (I) croduced by the method of (6). (A) are used for recombinant production of endogenous or exogenous proteins, specifically cellulase, useful in papermaking, medicine, food/feed industries, washing compositions and/or cas catalysts. (A) provide higher protein yields than wild-type cells. CC in the construction of the A. gossypii/S. halstedii genetic construct used to illustrate the method of the invention. (Updated on 06-AUG-2003 CC correct OS field.)
                                                                                                                                                                                                                                                                                                                                    Query Match

The enzyme is capable of hydrolysing beta-1,4-glycosidic linkages in the interior of a cellulose molecule, converting the cellulose to glucose. The C-terminal region of the enzyme is crucial for activity; deletion of 12 amino acids from that end results in loss of all activity. Recombinant endoglucanase can be expressed in host cells, esp. E. coli, utilising vectors incorporating the cenA gene. (Updated on 25-MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB5737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; SEQ ID NO 9876; 21pp + Sequence Listing; English.

MLO5 protein is encoded by a mutation-induced recessive allele MLO5, located on chromosome 3, that confers resistance to plant pathogens. Expression of native MLO genes in plants can be altered by transforming them with a DN construct comprising the mutated MLO gene. Decreasing the expression or activity of native MLO protein leads to enhanced resistance of plants against pathogens such as fungi, virus, nematodes and insects. MLO gene can be used to isolate related sequences from other plants and as molecular markers used in breeding programs aimed at improving disease resistance. MLO protein has anti-infective, antipathogenic, antiviral, antifungal, antihelminthic and anti-arthropod activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Creating or enhancing disease resistance in plants by modulating plant resistance genes expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryyotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57373-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                          Sequence 568 AA;
                                                                                                                                                                                                                                                                             The invention relates to an isolated polynucleotide that encodes nacrein. The methods and compositions of the present invention are useful for pearl oyster cultivation and pearl formation. The present sequence represents the amino acid sequence of Pinctada maxima nacrein.
                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Page 24-25; 29pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotide and polypeptide from the nacre gene of the Pinctada margaritifera species, useful for pearl oyster cultivation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chang FF,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              02-AUG-2001; 2001US-0310070P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27-FEB-2002; 2002US-00086510.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a method for identifying a compound (1) that inhibits binding of TSAP (Tumour Suppressor Activated Pathway) 6 to a TSAP6 binding protein. The present sequence is one such TSAP6 binding protein. (I) are useful for modulating tumour reversal and/or apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    26-DEC-2000; 2000FR-00017027.

                                                                                                                                                                                                                                                              The invention relates to multiprotein complexes from eukaryotes. Proteins of the invention and DNA sequences encoding them are given in records ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of proteins which is attached thereto from cells. Such protein complexes may comprise up to 30 distinct proteins. Protein complexes of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office. The complete document is available on CD-ROM
                                                                                                                                                                                                                                Sequence 175 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; SEQ ID NO 151; 17pp + Sequence Listing; English.

Patent No. 6335182
GENERAL INFORMATION:
APPLICANT: LOOSMOTE, Sheena M.
TITLE OF INVENTION: RECOMBINANT HAEMOPHILUS INFLUENZAE ADHESIN PROTEINS
FILE REFERENCE: 1038-860
CURRENT APPLICATION NUMBER: US/09/268,347
CURRENT FILING DATE: 1999-03-16
NUMBER OF SEQ ID NOS: 54
APPLICANT: LOOSMORE, Sheena M.
